Hello, Braid!

My name is Erik Kimsey. I'm applying for the position of *Junior JavaScript Engineer*.

I am a software engineer with professional experience using JavaScript (ES6/7+) and a breadth of technologies (both web and native). My experience covers the full-stack, but I am most passionate about pairing design and functionality for great user experience.

Regarding my stack knowledge, I have experience with most of your desired skills:

- *Significant experience with a lot of frontend tech (incl. React, CSS-preprocessing, D3, Angular, ThreeJS)*
- *SQL and Postgres database tech,*
- *NodeJS server development,*
- *RESTful APIs,*
- *and much more!*

I have contributed to several team projects as a JavaScript Engineer. And have *experience architecting* products and building them from conception to deployment.

Too, I like to think I'm a "person of character and integrity". And I am certainly seeking a "vibrant, positive, and inspiring workplace culture". I really dig working as a team as much as I do working solo. I enjoy the excitement of the start-up environment. *The reason being*, I am naturally entrepreneurial; I dig marketing, finance, leadership, design, and growth, just as much as I enjoy getting my hands dirty with code.

Furthermore, keeping current with new technologies and growing in breadth of skills is very important to me. Even more important, is having room for thinking creatively and seeking innovation.

If you're still reading and I seem like a good fit, I'd love to hear from you!

Best regards,

Erik Kimsey
